

CONSTRUCTION ZONE

GlobalConstruction

Road construction is everywhere. Speed is danger. With the roadways becoming an obstacle course with cones, signs, barriers, machinery, speed becomes the number one danger for workers.

GlobalConstruction is a fully automated portable system for detection of vehicle speed. Our G2 technology is state of the art high definition video and photo laser. Laser detection is currently the most accurate measurement of speed. It uses a light beam directed specifically at the vehicle and computes by the change in distance over time.

GlobalConstruction Advantage

- No upfront costs
- Compliant in all jurisdictions*
- Calibrated continuously for the most accurate reporting
- Full court support
- Electronic Back Office
- High resolution image recording uploaded daily for viewing
- Out of Province Violations

*certain jurisdictions may change regulations and required updating
