

PEDESTRIAN CROSSWALKS

GlobalPed

According to the National Highway Traffic Safety Administration, in 2006 over 500 pedestrians died while using a crosswalk. Failing to yield to a pedestrian either in or stopped facing a crosswalk is the most common ticket issued. Vehicles must become aware of the seriousness of the infraction as it will have negative effects to the duration of their life. It can come down to inches!

GlobalPed is our solution. Video includes both the vehicle and the pedestrian in a crosswalk. Large volume traffic or incident related crosswalks can be monitored and portable signage can warn drivers ahead. Safety is the number one concern for the pedestrian and our portable solution can move to any crosswalk intersection.

GlobalPed Advantage

- No upfront costs
- Compliant in all jurisdictions*
- Calibrated continuously for the most accurate reporting
- Full court support
- Electronic Back Office
- High resolution image recording uploaded daily for viewing
- Out of Province Violations

*certain jurisdictions may change regulations and required updating
