

# SPEED ON GREEN

## GlobalSpeedonGreen

Speeding and red light running combined may be the single most dangerous accident class there is. Typically a t-bone accident occurs at intersections and with the addition of speed it dramatically increases the risk of injury and/or death.

*GlobalSpeedonGreen* is the newest and most innovative digital system for detection of vehicle speed (instantaneous/average), red light and trajectory based violations. It does not need additional, external sensors as it detects the vehicle trajectory directly from images taken by high definition cameras, repeating the real time recognition process at every new video frame.

It is able to detect single, multiple, parallel and simultaneous violations.

### GlobalSpeedonGreen Advantage

- No upfront costs
- Compliant in all jurisdictions\*
- Calibrated continuously for the most accurate reporting
- Full court support
- Complete processing department in-house
- High resolution image recording uploaded daily for viewing

\*certain jurisdictions may change regulations and required updating
